

RECONFIGURABLE AND RECEPTION

WALLGOLDFINGER | CASE STUDY 8

THE CHALLENGE

A global law firm needs tables for its New York headquarters, specifically reconfigurable tables for its multipurpose room and a solution for its conference center with an operable wall. The tables must be of the highest quality and integrate technology. A reception desk of leather and stone is also part of the vision of the project architect.

THE SOLUTION

WallGoldfinger Furniture has perfected two reconfigurable product lines perfect for this legal leader's needs. Arbor multipurpose room tables with removable legs and custom compact upright storage carts easily reconfigure. The tables' legs also gang for unmatched leg room. Patent-pending Summit table with its tilting top, casters and high-end look is perfect for fitting between two matching fixed tables to create a long meeting space. Remove the Summits, tilt and nest them in your storage space, and engage your operable wall to create two meeting spaces. WallGoldfinger Furniture calls this its bridge design. The beauty of the design is one of the fixed table's tops slides a couple of inches to allow access to the Summits.

And WallGoldfinger has been creating custom corporate furniture for decades in its state-of-the-art factory. It not only has the custom capabilities to create the high-end reception desk, its renowned for materials integration and has an expert stone specialist perfect for the job.

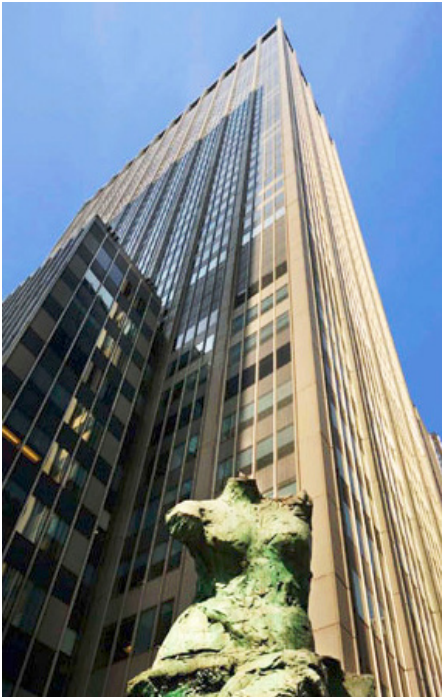

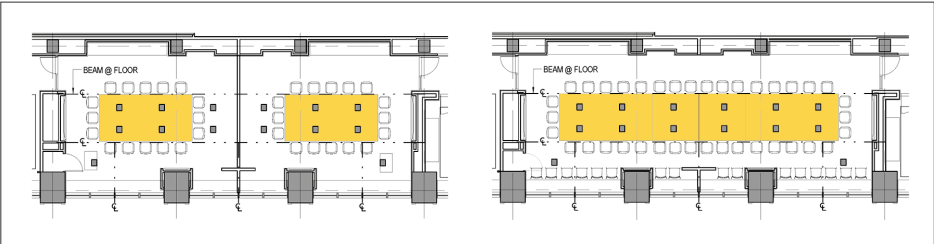

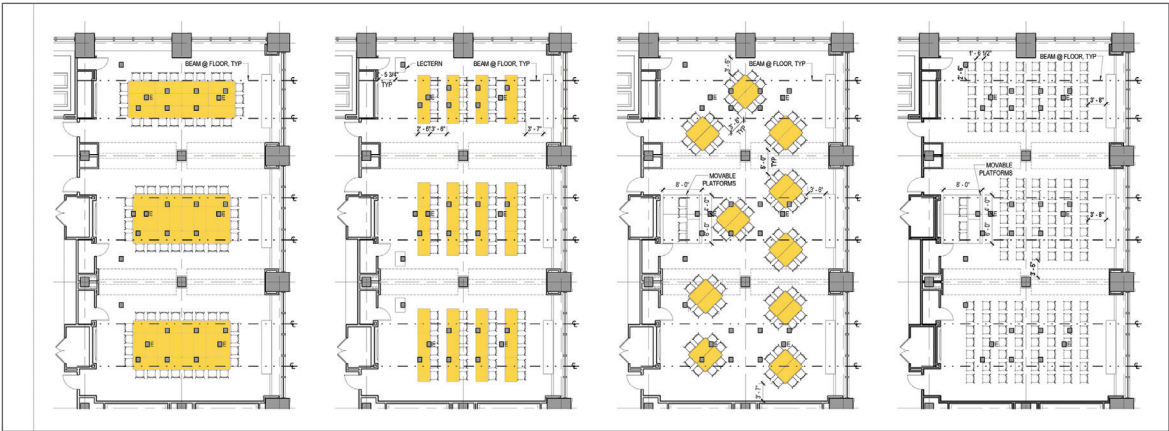

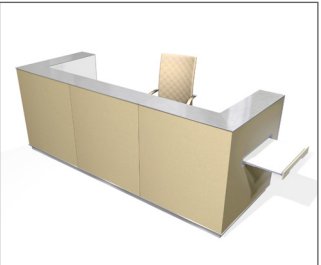

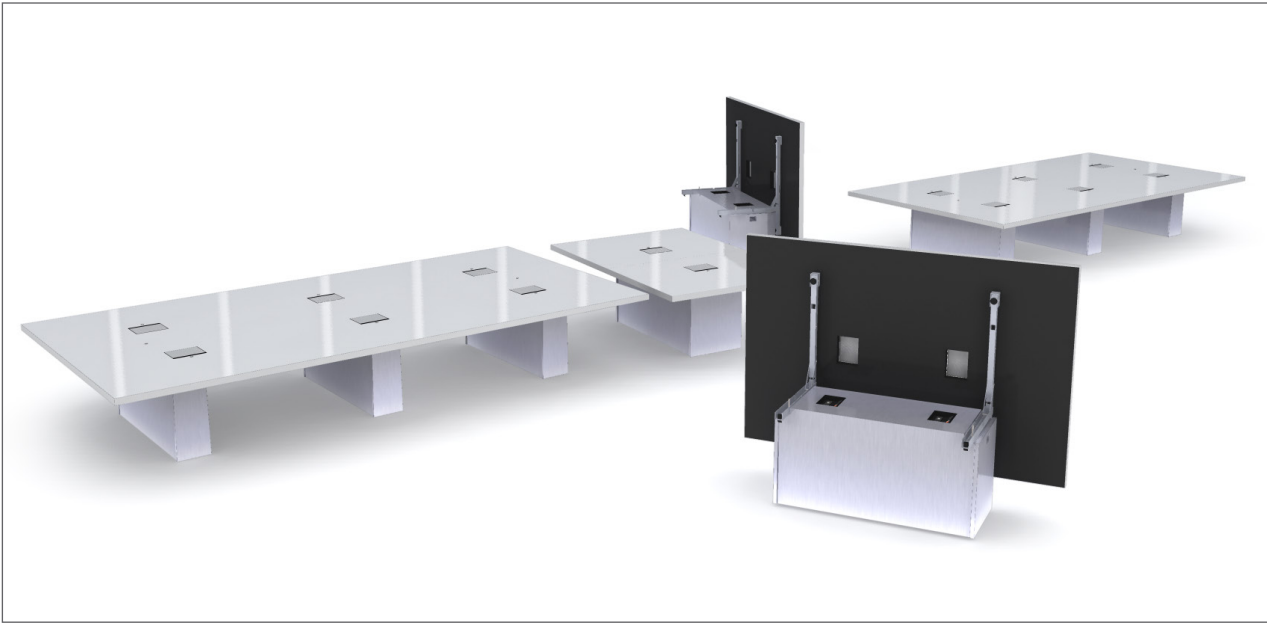

DESIGNER

Gensler, New York, NY
